Problem:

- Users may not know the exact medical term for their symptom.
- Searching manually can be confusing for first-time users.

Solution:

- Introduce an interactive visual body map for symptom discovery
- Help users identify symptoms through body part selection instead of medical terminology.
- Provide a more intuitive and engaging way to explore health information.

Interactive Body Map

Select Body Part

Choose Symptom

View Possible Causes

View Precautions

Consult Doctor (if needed)

Benefits:

- Easier symptom discovery
- More intuitive than text search
- Better user experience
- Helps users navigate health information quickly

Example:
